

Foundations of Technical Programming Assignment 2

Maximum - 25 marks

You may be asked to demonstrate/explain your work to the tutor, if you are absent/unavailable or fail to demonstrate properly, zero marks will be awarded.

Please note, this is an individual task and it will be checked for plagiarism. All the involved parties will be penalised if any plagiarism is found.

Please visit <https://goo.gl/hQ87zg> for more details.

Instructions

1. This assignment is based on a business scenario, with 4 stages of solutions.
 - A. Stage – A – Maximum 59% (topics from week 1 to 9)
 - B. Stage – B – Maximum 69% (topics from week 1 to 10)
 - C. Stage – C – Maximum 79% (topics from week 1 to 11)
 - D. Stage – D – Maximum 100% (topics from week 1 to 12)
2. **Each stage elaborates on the previous stage, so you need to submit only one stage.**
3. Copy and paste your code into **word document**
4. Copy and paste the screen shot of the output window in the same word document
5. Use only .doc, .docx extensions – no other format will be accepted for marking
6. Marks will be given for proper indentation and comments
7. Use user-defined functions whenever possible

Business Scenario: "Tasty Burgers", a very fast-growing burger outlet in Melbourne has approached your company (Software Inc) to help their business by providing the required IT solutions.

Tasty Burgers – Manager Jim has given the following brief about their current business practices and their expectations:

The burger outlet started in 2010 has seen very steady growth over the past decade. Their main item and the most popular among the locals are the burgers, the outlet also serves hot chips and cold drinks. Currently, the restaurant uses a POS (Point of Sales) system to take orders.

Hugely attracted by the self-ordering kiosks at other popular fast-food restaurants, the management of Tasty Burgers wanted to implement a similar system at their outlet.

During an earlier meeting with your manager (Tom), Jim has been briefed about the challenges in implementing a full-fledged self-ordering kiosk as a single project. Therefore, it has been decided to break the project into 4 stages (A, B, C & D). You are entrusted with the responsibility to develop these stages.

Your manager – Tom has listed the requirements of the stages below. (You are required to complete one stage at a time.)

Stage – A

- A menu-driven application, using which customers can order burgers. There is no need to offer different varieties of burgers at this stage.
- Burgers are sold at 12\$ each.
- A 10% discount from the total bill value is offered when five or more burgers are ordered.
- The kiosk should allow users to cancel their orders by entering the Receipt Number.
- Your program should be capable of storing the details of 25 orders at the maximum.

Structure – Meals (Pointer to Burger Structure, Pointer to Chips Structure, Pointer to Drinks Structure)

Nested Structure – Order (Receipt No, Total Order Value, Pointer to Meals structure, Pointer to Chips Structure, Pointer to Drinks Structure)

All other features of Stage-B to be retained.

Additionally

As a last-minute requirement, the management of Tasty Burgers” wishes to see the total revenue for a day.

After analysing this new requirement, you and Tom has decided to provide this feature as a hidden option in the main menu.

The management of Tasty Burgers will be able to activate the calculation of the “Total Revenue” feature by entering 9 as the value in the main menu.

To prevent customers from using this feature by accident, a password will be requested when this option is selected from the main menu.
